Integra® MicroFrance®
Benninger Microlaryngeal Instruments
Developed in conjunction with Michael Benninger, MD
A New Level of Versatility
Laryngeal instruments that combine quality, precision, and stability

The Benninger Microlaryngeal Instruments are designed to help provide stabilization of the surgeon’s hand. The reverse action handles are thumb-activated to help reduce the amount of distal tip movement and wrist movement required by the surgeon for atraumatic dissection. This set includes forceps, knives, retractors, injection instruments, suction cannulas, and spatulas for microlaryngeal manipulation and dissection.
