Implantation & Closure
Indications

The indications for use of the Silicone PIP are for cementless replacement of the proximal interphalangeal joint in patients with advanced osteoarthritis, post-traumatic arthritis, and rheumatoid arthritis.

Contraindications

- Active local or systemic infection;
- Destruction of the metacarpal, phalanx, or phalanges or poor bone quality which prevents adequate fixation of the implant;
- Loss of musculature, neuromuscular compromise, or vascular deficiency in the affected finger;
- Growing patients with open epiphyses;
- Patients with high activity levels; and
- Patients unwilling or unable to comply with physician’s instructions.

See package insert for full prescribing information.

As the manufacturer of this device, Integra does not practice medicine and does not recommend this or any other surgical technique for use on a specific patient. The surgeon who performs any implant procedure is responsible for determining and using the appropriate techniques for implanting the device in each patient.
