Integra®
Titan™ Reverse Shoulder System-S

Designed to fit your practice
**Body, Stem, and Glensosphere**

- **Inlay Humeral** prosthesis design allows for reproducible conversion from TSA to RSA.
- **Polished suture holes** for added bone and soft tissue fixation and minimal suture abrasion.
- **142° neck angle** designed to reduce scapular notching and allow for easier glenoid access.
- **Modular platform stem** with diaphyseal fixation allows for unlimited version adjustment in revisions.

**4 Glenospheres** with +2 or +5 lateralization; 4mm of optional eccentricity.

**Baseplate**

- **Independent central screw** to provide initial compression and stability.
- **Central boss** to encourage long-term fixation through bony ingrowth.
- **4 variable angle peripheral screws** with compression; superior and inferior screws are locking.

**BASEPLATE DESIGN**

A comprehensive 3-D CT database was used to develop a baseplate that maximizes stability and is designed to fit patients of all sizes.¹

Titan™ Modular Shoulder System

Indications
The Titan™ Reverse Shoulder System is indicated for use in a grossly deficient rotator cuff joint with severe arthropathy or a previous failed joint replacement with a grossly deficient rotator cuff joint. The patient’s joint must be anatomically and structurally suited to receive the selected implants and a functional deltoid muscle is necessary to use the device. The Titan Reverse Shoulder System is indicated for primary, fractures - including proximal humeral, -or revision total shoulder replacement for the relief of pain and significant disability due to gross rotator cuff deficiency. The glenoid base plate is intended for cementless application with the addition of screws for fixation. The humeral stem is indicated for cemented or uncemented use and the humeral body component is intended for cementless use.

See package insert for full prescribing information.
