### Omnipore® Dermal Regeneration Matrix

**DESCRIPTION:** Omnipore® is an advanced bilayer matrix for dermal regeneration. The dermal replacement layer consists of a porous, three-dimensional matrix, comprised of bovine collagen and chondroitin-6-sulfate (C6S) that is designed with a controlled porosity and defined degradation rate. The temporary epidermal layer is made of a thin polysiloxane (silicone) layer to provide immediate wound coverage and control microbial loss from the wound.

**INDICATIONS:** Omnipore® is indicated for use in the treatment of partial and full-thickness neuropathic diabetic foot ulcers that are greater than six weeks in duration, with no capsule, tendon or bone exposed, when used in conjunction with standard diabetic ulcer care.

**CONTRAINDICATIONS:** Omnipore® should not be used in patients with known sensitivity to bovine collagen or chondroitin materials. Omnipore® should not be used on clinically diagnosed infected wounds.

**WARNINGS:** Debridement or excision must be done thoroughly to remove any remaining necrotic tissue that may delay healing or cause infection. Omnipore® will not incorporate into a wound bed of nonviable tissue. Leaving any remaining nonviable tissue may create an environment for bacterial growth.

**PRECAUTIONS:** The following complications are possible with the use of wound treatments. The product should be removed if any of these conditions occur: infection, chronic inflammation (initial application of wound products may be associated with transient, mild, localized inflammation), allergic reaction, excessive redness, pain, or swelling. There have been no clinical studies evaluating Omnipore® in pregnant women. Caution should be exercised before using Omnigraft in pregnant women. Such use should occur only when the anticipated benefit clearly outweighs the risk.

**ADVERSE EVENTS:** All adverse events that were reported in the study evaluating Omnipore® for the treatment of diabetic foot ulcers at a frequency of ≥ 1% in either cohort are presented in Table 1 in the Instructions for Use. This table includes adverse events that were both attributed to and not attributed to treatment. The most common adverse events experienced by patients treated with Omnipore® were: wound infection (11%); new, worsening, or recurring wounds (14%); pain around the wound (9%); infection beyond the wound (either cellulitis or osteomyelitis, 14%); swelling (5%); nausea (5%); worsening health condition (4%). These adverse events occurred in a similar or lower percentage of patients treated with Omnigraft compared to patients treated with standard wound care alone.

Omnigraft is also marketed as Integra® Dermal Regeneration Template and has been studied extensively in life-threatening thermal injuries and scar contraction reconstruction. Refer to the Integra® Dermal Regeneration Template package insert for complete adverse event information. Apligraf® is a registered trademark of Novartis. Dermagraft® is a registered trademark of Organogenesis, Inc.

### REFERENCES

### PriMatrix® Dermal Repair Scaffold

**CONTRAINDICATIONS:** PriMatrix® should not be used for patients with a known history of hypersensitivity to collagen or bovine products.

**WARNINGS AND PRECAUTIONS:**
- Do not expose to chemicals or substances other than sterile, room temperature 0.9% saline.
- Excessive heat can damage collagen. Do not hydrate in 0.9% saline warmed above room temperature. If, when hydrated, the product shrinks in size, DO NOT use the product as it may be damaged.
- PriMatrix should be used with caution in regions where an infection is suspected or exists. Try any existing infection appropriately.
- PriMatrix should not be applied directly on third degree burns.

**POTENTIAL COMPLICATIONS:** The following complications are possible. If any of these conditions occur, the device should be removed:
- Infection
- Chronic inflammation
- Allergic reaction
- Excessive redness, pain, swelling, or blistering
